(54) Title: A SEALING ELEMENT AND A COUPLING DEVICE AND A VALVE DEVICE PROVIDED WITH SUCH A SEAL-  
ING ELEMENT

(57) Abstract: The invention relates to a sealing element (20) comprising a hollow body (26) of metallic material and first and second male sealing members (21a, 21b) formed at a respective end of the body (26). The respective male sealing member (21a, 21b) has an external spherical contact surface (23a, 23b) designed for mating with a corresponding internal conical contact surface of a female sealing member so as to form a fluid-tight seal between the male sealing member and the female sealing member when their contact surfaces are pressed against each other. The invention also relates to a coupling device and a valve device provided with such a sealing element.
